EDUCATION

Case Western Reserve University - Cleveland, OH
Bachelor of Science in Computer Science, Minor in Data Science

Expected Graduation: May 2027
GPA: 3.70

SKILLS

Languages & Frameworks: TypeScript, JavaScript, Python, Java, Swift, SQL, React, Node.js, Express, REST APIs

Tools & Infrastructure: PostgreSQL, Redis, Docker, AWS, Azure, Git, Linux, Databricks, Twilio, Anthropic API

Coursework: Data Structures, Algorithms, Computer Networks, Full Stack Development, Software Engineering.

EXPERIENCE

Honeywell Technologies

Richmond, VA

Software Engineering Intern

Jun 2026 - Aug 2026

- Architected an agnostic notification framework for the Niagara Cloud platform enabling configurable push and SMS delivery, acknowledgement, and multi-level escalation workflows projected to generate thousands of dollars in monthly subscriptions.
- Built an AI-assisted incident orchestration service that correlates hundreds of alarm streams into root-cause incidents using Niagara metadata and equipment relationships, reducing alarm volume by 90% to improve operator response efficiency.
- Tools:** React, Python, Java, TypeScript, Node.js, PostgreSQL, Redis, RabbitMQ, Azure Notifications, Twilio

Buckeye AI

San Francisco, CA

Founding Engineer

Jan 2026 - Present

- Context engineered a self-healing platform that auto-fixes broken hospital portal workflows when UIs change, extending a benefits verification system serving 7 hospitals and \$9M+ in recovered charity care debt.
- Designed a dual-mode system: a heavyweight path using 45k tokens for novel problems and a lightweight path that retrieves YAML patterns at 45x less the cost, with 90% coverage as the pattern library grows.
- Tools:** TypeScript, Claude API (Anthropic), QwenVL, PostgreSQL, E2B, Stagehand, Browserbase

John Deere

Moline, IL

Software Engineering Intern

May 2025 - Aug 2025

- Reduced security alert triage time by 42% by building backend APIs and a Databricks ETL pipeline that automated ingestion of 90k+ cloud threat findings from ServiceNow projecting \$60k in annual savings.
- Enabled security teams to respond 3x faster to actionable threats by integrating real-time GitHub repository risk data with Cloud Threat Resource feeds, surfacing critical vulnerabilities during active development.
- Tools:** Python, Databricks, ServiceNow API, PostgreSQL, Kubernetes, Azure DevOps, Git, Jira

Parker Hannifin Corporation

Cleveland, OH

Software Engineering Intern

May 2024 - Aug 2024

- Increased active usage of internal AI assistant by 30% across engineering teams by improving search responsiveness and relevance through a RAG-based retrieval system, reducing time-to-answer for technical queries by 60%.
- Automated Python backend ingestion pipelines supporting parallel processing, improving retrieval latency from 8.2s to 1.1s.
- Tools:** Python, Javascript, Azure AI Search, React, FastAPI, Vector Embeddings

PROJECTS

Helthy | *Personalized Fitness Platform*

Aug 2025

- Built a cross-platform fitness application serving 800+ users, for real-time personalized health coaching.
- Engineered an agentic AI orchestration with function calling, SSE streaming, prompt caching, deterministic recommendation engines, and parallel context hydration across 10+ relational data sources.
- Tools:** React Native, TypeScript, Fastify, PostgreSQL, Prisma, Claude API, Docker, JWT, Git.

Ekudi | *Personal Finance Assistant*

Oct 2025

- Co-developed a personal finance web app that combines budgeting, transaction tracking, and AI-assisted insights.
- Built secure transaction ingestion and sync pipelines with webhook handling, encryption, and scheduled jobs.
- Tools:** Next.js, Node.js, PostgreSQL, Prisma, Stripe API, OpenAI API, Anthropic API, Redis.

LEADERSHIP

App Innovators and Developers Club | *Vice President*

Oct 2025 - Present

- Led collaborative app development sprints, contributing to 5+ members securing interviews at competitive tech companies.

College of Arts and Sciences | *Teaching Assistant - Software Engineering*

Aug 2025- Dec 2025

- Reviewed 150+ code submissions per semester, delivering detailed feedback on production-quality coding standards and held technical lab sessions on API design and version control, strengthening students' ability to build maintainable systems.
